Certain versions of [Pix Firewall](#) from [Cisco](#) contain the following vulnerability:

By design, the "established" command on the Cisco PIX firewall allows connections from one host to arbitrary ports of a target host if an alternative conduit has already been allowed, which can cause administrators to configure less restrictive access controls than intended if they do not understand this functionality.

CVE-1999-1582 has been assigned by [M](#) cve@mitre.org to track the vulnerability
