

CVE-2001-0660

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

Summary

CVE	CVE-2001-0660
State	PUBLIC
Assigner	cve@mitre.org
Source Priority	CVE Program / NVD first with legacy fallback
Published	2001-10-30 05:00:00 UTC
Updated	2018-10-12 21:30:00 UTC
Description	Outlook Web Access (OWA) in Microsoft Exchange 5.5, SP4 and earlier, allows remote attackers to identify valid user email addresses by sending a specially crafted email to the OWA server. The vulnerability exists in the OWA server's handling of email addresses in the 'To' field of the email header. An attacker can send an email with a valid email address in the 'To' field, and the OWA server will respond with a 200 OK status, indicating that the email address is valid. This can be used to identify valid email addresses for further attacks.

Risk And Classification

Problem Types: NVD-CWE-Other

NVD Known Affected Configurations (CPE 2.3)

Type	Vendor	Product	Version	Update	Edition	Language
Application	Microsoft	Exchange Server	All	sp4	All	All
