

# CVE-2001-1506

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2001-1506                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                     |
| <b>Assigner</b>        | cve@mitre.org                                                                                                              |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                               |
| <b>Published</b>       | 2001-12-31 05:00:00 UTC                                                                                                    |
| <b>Updated</b>         | 2017-07-11 01:29:00 UTC                                                                                                    |
| <b>Description</b>     | Unknown vulnerability in the file system protection subsystem in HP Secure OS Software for Linux 1.0 allows additional use |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type             | Vendor             | Product                   | Version | Update | Edition | Language |
|------------------|--------------------|---------------------------|---------|--------|---------|----------|
| Operating System | <a href="#">Hp</a> | <a href="#">Secure Os</a> | 1.0     | All    | linux   | All      |
| Operating System | <a href="#">Hp</a> | <a href="#">Secure Os</a> | 1.0     | All    | linux   | All      |
