## CVE-2002-1940

Source: Mitre

Source: NIST

CVE.ORG

Print: PDF

Certain versions of [Lcc-win32](#) from [Jacob Navia](#) contain the following vulnerability:

LCC-Win32 3.2 compiler, when running on Windows 95, 98, or ME, writes portions of previously used memory after the import table, which could allow attackers to gain sensitive information. NOTE: it has been reported that this problem is due to the OS and not the application.

CVE-2002-1940 has been assigned by [M](#) [cve@mitre.org](mailto:cve@mitre.org) to track the vulnerability
