## CVE-2002-2052

[Source: Mitre](#)

[Source: NIST](#)

[CVE.ORG](#)

[Print: PDF](#)

Certain versions of [ios](#) from [Cisco](#) contain the following vulnerability:

Cisco 2611 router running IOS 12.1(6.5), possibly an interim release, allows remote attackers to cause a denial of service via port scans such as (1) scanning all ports on a single host and (2) scanning a network of hosts for a single open port through the router. NOTE: the vendor could not reproduce this issue, saying that the original reporter was using an interim release of the software.

CVE-2002-2052 has been assigned by [M](#) [cve@mitre.org](mailto:cve@mitre.org) to track the vulnerability

CVSS2 Score: **5 - MEDIUM**

**Access Vector**

**Access Complexity**

**Authentication**

**NETWORK**

**LOW**

**NONE**

**Confidentiality Impact**

**Integrity Impact**

**Availability Impact**

**NONE**
