

# CVE-2003-0417

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2003-0417                                                                                                                     |
| <b>State</b>           | PUBLIC                                                                                                                            |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                     |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                      |
| <b>Published</b>       | 2003-06-30 04:00:00 UTC                                                                                                           |
| <b>Updated</b>         | 2016-10-18 02:33:00 UTC                                                                                                           |
| <b>Description</b>     | Directory traversal vulnerability in Son hServer 0.2 allows remote attackers to read arbitrary files via "." (modified dot-dot) s |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                  | Product                     | Version | Update | Edition | Language |
|-------------|-------------------------|-----------------------------|---------|--------|---------|----------|
| Application | <a href="#">Super-m</a> | <a href="#">Son Hserver</a> | 0.2     | All    | All     | All      |
| Application | <a href="#">Super-m</a> | <a href="#">Son Hserver</a> | 0.2     | All    | All     | All      |
