Summary

CVE	CVE-2003-0650
State	PUBLISHED
Assigner	mitre
Source Priority	CVE Program / NVD first with legacy fallback
Published	2003-08-27 04:00:00 UTC
Updated	2025-04-03 01:03:51 UTC
Description	Directory traversal vulnerability in GSAPAK.EXE for GameSpy Arcade, possibly versions before 1.3e, allows remote attackers to execute arbitrary code or cause a denial of service (crash) via crafted requests to the /cgi-bin/ directory. The vulnerability exists because the application does not properly sanitize the user input before using it to construct the file path for the request. This allows an attacker to traverse the directory structure and access files that should not be accessible. The vulnerability is present in the GSAPAK.EXE application, which is used by GameSpy Arcade. The vulnerability is present in versions before 1.3e. The vulnerability allows remote attackers to execute arbitrary code or cause a denial of service (crash) via crafted requests to the /cgi-bin/ directory.
