CVE-2004-1104

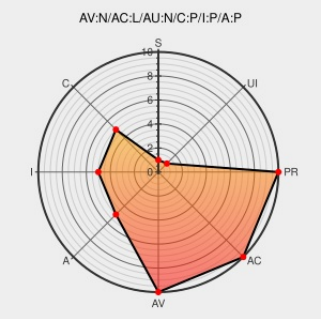
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Ie from Microsoft contain the following vulnerability:

Microsoft Internet Explorer 6.0 SP2 allows remote attackers to spoof a legitimate URL in the status bar and conduct a phishing attack via a web page that contains a BASE element that points to the legitimate site, followed by an anchor (a) element with an empty "href" attribute, and a FORM whose action points to a malicious URL, and an INPUT submit element that is modified to look like a legitimate URL.

CVE-2004-1104 has been assigned by cve@mitre.org to track the vulnerability

CVSS2 Score: 7.5 - HIGH
