CVE-2004-2527

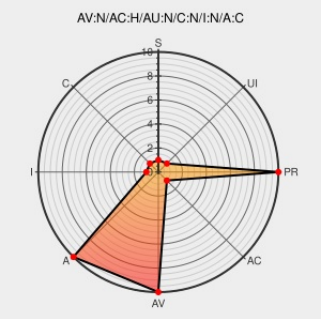
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Windows 2003 Server from Microsoft contain the following vulnerability:

The local and remote desktop login screens in Microsoft Windows XP before SP2 and 2003 allow remote attackers to cause a denial of service (CPU and memory consumption) by repeatedly using the WinKey+"U" key combination, which causes multiple copies of Windows Utility Manager to be loaded more quickly than they can be closed when the copies detect that another instance is running.

CVE-2004-2527 has been assigned by cve@mitre.org to track the vulnerability

CVSS2 Score: 5.4 - MEDIUM

Access Vector	Access Complexity	Authentication
