Certain versions of **le** from **Microsoft** contain the following vulnerability:

Microsoft Internet Explorer 6 SP2 (6.0.2900.2180) crashes when the user attempts to add a URI to the restricted zone, in which the full domain name of the URI begins with numeric sequences similar to an IP address. NOTE: if there is not an exploit scenario in which an attacker can trigger this behavior, then perhaps this issue should not be included in CVE.

CVE-2005-1791 has been assigned by [M cve@mitre.org](mailto:cve@mitre.org) to track the vulnerability
