CVE-2005-2377

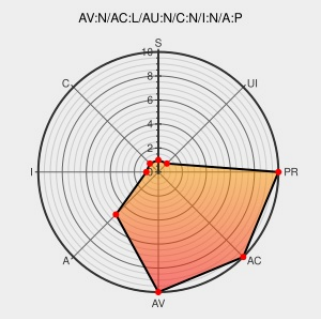
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Mandrake Linux from Mandrakesoft contain the following vulnerability:

nss_ldap 181 to versions before 213, as used in Mandrake Corporate Server and Mandrake 10.0, and other operating systems, does not properly handle a SIGPIPE signal when sending a search request to an LDAP directory server, which might allow remote attackers to cause a denial of service (crond and other application crash) if they can cause an LDAP server to become unavailable. NOTE: it is not clear whether this attack scenario is sufficient to include this item in CVE.

CVE-2005-2377 has been assigned by cve@mitre.org to track the vulnerability

CVSS2 Score: 5 - MEDIUM
