Last Modified on: 03/23/2021 11:27:23 PM UTC

CVE-2005-3496

Source: Mitre

Source: NIST

CVE.ORG

Print: PDF

Certain versions of [Php Handicapper](#) from [Php Handicapper](#) contain the following vulnerability:

Cross-site scripting (XSS) vulnerability in PHP Handicapper allows remote attackers to inject arbitrary web script or HTML via the msg parameter to msg.php. NOTE: some sources identify a second vector in the login parameter to process_signup.php, but the original source says that it is for CRLF injection (CVE-2005-4712). Also note: the

vendor has disputed CVE-2005-3497, and it is possible that the dispute was intended to include this issue as well. If so, followup investigation strongly suggests that the original report is correct.

CVE-2005-3496 has been assigned by [M](#) cve@mitre.org to track the vulnerability
