## CVE-2005-3725

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Prestige 2000w V.1voip Wi-fi Phone](#) from [Zyxel](#) contain the following vulnerability:

Zyxel P2000W Version 1 VOIP WIFI Phone Wj.00.10 uses hardcoded IP addresses for its DNS servers, which could allow remote attackers to cause a denial of service or hijack Zyxel phones by attacking or spoofing the hardcoded DNS servers. NOTE: it could be argued that this issue reflects an inherent limitation of DNS itself, so perhaps it should not be included in CVE.

CVE-2005-3725 has been assigned by [M](#) [cve@mitre.org](mailto:cve@mitre.org) to track the vulnerability
