Description	Multiple SQL injection vulnerabilities in Simple Document Management System (SDMS) 2.0-CVS and earlier allow remote attackers to execute arbitrary SQL commands via the 'id' parameter in the 'view.php' script. The vulnerability exists in the 'view.php' script, which does not properly sanitize the 'id' parameter before using it in a SQL query. This allows an attacker to inject malicious SQL code that can be executed by the database. The affected versions are 2.0-CVS and earlier.
