## CVE-2005-4486

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Qp7 Enterprise](#) from [Quantum Art](#) contain the following vulnerability:

**\*\* DISPUTED \*\*** SQL injection vulnerability in Quantum Art QP7.Enterprise (formerly Q-Publishing) allows remote attackers to execute arbitrary SQL commands via the p\_news\_id parameter to (1) news\_and\_events\_new.asp and (2) news.asp. NOTE: on 20060227, the vendor disputed the accuracy of this report, saying that the

p\_news\_id, news\_and\_events\_new.asp, and news.asp are not specifically part of their product, although they could be dynamically generated through use of the product. Some investigation by CVE suggests evidence that the news\_and\_events\_new.asp page has at least a forced invalid SQL syntax error, but this could not be repeated for news.asp.

CVE-2005-4486 has been assigned by [M](#) cve@mitre.org to track the vulnerability
