## Summary

|                 |                                                                                                                                |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------|
| CVE             | CVE-2006-0188                                                                                                                  |
| State           | PUBLISHED                                                                                                                      |
| Assigner        | mitre                                                                                                                          |
| Source Priority | CVE Program / NVD first with legacy fallback                                                                                   |
| Published       | 2006-02-24 00:02:00 UTC                                                                                                        |
| Updated         | 2025-04-03 01:03:51 UTC                                                                                                        |
| Description     | webmail.php in SquirrelMail 1.4.0 to 1.4.5 allows remote attackers to inject arbitrary web pages into the right frame via a UF |

## Risk And Classification

**Primary CVSS:** v2.0 4.3 from nvd@nist.gov

AV:N/AC:M/Au:N/C:N/I:P/A:N

**EPSS:** 0.013590000 probability, percentile 0.801770000 (date 2026-04-16)

**Problem Types:** NVD-CWE-Other | n/a
