## Summary

|                 |                                                                                                                               |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------|
| CVE             | CVE-2006-0507                                                                                                                 |
| State           | PUBLISHED                                                                                                                     |
| Assigner        | mitre                                                                                                                         |
| Source Priority | CVE Program / NVD first with legacy fallback                                                                                  |
| Published       | 2006-02-01 23:02:00 UTC                                                                                                       |
| Updated         | 2025-04-03 01:03:51 UTC                                                                                                       |
| Description     | Multiple cross-site scripting (XSS) vulnerabilities in Easy CMS allow remote attackers to inject arbitrary web script or HTML |

## Risk And Classification

**Primary CVSS:** v2.0 4.3 from nvd@nist.gov

AV:N/AC:M/Au:N/C:N/I:P/A:N

**EPSS:** 0.005270000 probability, percentile 0.671470000 (date 2026-04-16)

**Problem Types:** NVD-CWE-Other | n/a
