

# CVE-2006-1378

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                   |
|------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-1378                                                                                                     |
| <b>State</b>           | PUBLIC                                                                                                            |
| <b>Assigner</b>        | cve@mitre.org                                                                                                     |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                      |
| <b>Published</b>       | 2006-03-24 02:02:00 UTC                                                                                           |
| <b>Updated</b>         | 2018-10-18 16:32:00 UTC                                                                                           |
| <b>Description</b>     | PasswordSafe 3.0 beta, when running on Windows before XP, uses a weak random number generator (C++ rand function) |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                      | Product                       | Version | Update | Edition | Language |
|-------------|-----------------------------|-------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Counterpane</a> | <a href="#">Password Safe</a> | 3.0     | All    | All     | All      |
| Application | <a href="#">Counterpane</a> | <a href="#">Password Safe</a> | 3.0     | All    | All     | All      |
