CVE-2006-1623

[Source: Mitre](#)

[Source: NIST](#)

[CVE.ORG](#)

[Print: PDF](#)

Certain versions of [Flexible Development](#) from [Andries Bruinsma](#) contain the following vulnerability:

Unspecified vulnerability in main.php in an unspecified "file created by Andries Bruinsma," possibly a FlexiBle Development (FXB) application, allows remote attackers to include and execute arbitrary PHP code. NOTE: this disclosure is extremely vague and has very little information about the specific vulnerability type. In addition, there is

little public information on the named product. Finally, an XSS vector is implied in the subject line, but because there is no other information and evidence of a cut-and-paste error, it will not be assigned a separate CVE identifier unless additional information is provided.

CVE-2006-1623 has been assigned by [M](#) cve@mitre.org to track the vulnerability

CVSS2 Score: **4.3 - MEDIUM**

Access Vector	Access Complexity	Authentication
