| Published       | 2006-04-19 16:06:00 UTC                                                                                                                                                                                                               |
| Updated         | 2025-04-03 01:03:51 UTC                                                                                                                                                                                                               |
| Description     | Multiple SQL injection vulnerabilities in ModernBill 4.3.2 and earlier allow remote attackers or administrators to execute arbitrary SQL commands via the 'id' parameter to the 'getProductDetails' function in 'productDetails.php'. |

## Risk And Classification

**Primary CVSS:** v2.0 6.5 from nvd@nist.gov

AV:N/AC:L/Au:S/C:P/I:P/A:P

**EPSS:** 0.004750000 probability, percentile 0.648510000 (date 2026-04-17)

**Problem Types:** NVD-CWE-Other | n/a
