## Summary

|                 |                                                                                                                                |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------|
| CVE             | CVE-2006-2188                                                                                                                  |
| State           | PUBLISHED                                                                                                                      |
| Assigner        | mitre                                                                                                                          |
| Source Priority | CVE Program / NVD first with legacy fallback                                                                                   |
| Published       | 2006-05-04 12:38:00 UTC                                                                                                        |
| Updated         | 2025-04-03 01:03:51 UTC                                                                                                        |
| Description     | Multiple cross-site scripting (XSS) vulnerabilities in CMScout 1.10 and earlier allow remote attackers to inject arbitrary web |

## Risk And Classification

**Primary CVSS:** v2.0 6.8 from nvd@nist.gov

AV:N/AC:M/Au:N/C:P/I:P/A:P

**EPSS:** 0.023470000 probability, percentile 0.849080000 (date 2026-04-16)

**Problem Types:** NVD-CWE-Other | n/a
