

# CVE-2006-3050

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-3050                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                        |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                 |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                  |
| <b>Published</b>       | 2006-06-16 10:02:00 UTC                                                                                                       |
| <b>Updated</b>         | 2018-10-18 16:45:00 UTC                                                                                                       |
| <b>Description</b>     | Directory traversal vulnerability in detail.php in SixCMS 6.0, and other versions before 6.0.6patch2, allows remote attackers |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                                  | Product                | Version | Update | Edition | Language |
|-------------|-----------------------------------------|------------------------|---------|--------|---------|----------|
| Application | <a href="#">Six Offene Systeme Gmbh</a> | <a href="#">Sixcms</a> | All     | All    | All     | All      |
