

# CVE-2006-3178

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-3178                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                     |
| <b>Assigner</b>        | cve@mitre.org                                                                                                              |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                               |
| <b>Published</b>       | 2006-06-23 00:02:00 UTC                                                                                                    |
| <b>Updated</b>         | 2017-07-20 01:32:00 UTC                                                                                                    |
| <b>Description</b>     | Directory traversal vulnerability in extract_chmLib example program in CHM Lib (chmlib) before 0.38 allows remote attacker |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                   | Product                 | Version | Update | Edition | Language |
|-------------|--------------------------|-------------------------|---------|--------|---------|----------|
| Application | <a href="#">Jed Wing</a> | <a href="#">Chm Lib</a> | All     | All    | All     | All      |
