

CVE-2006-3617

Published on: 07/14/2006 12:00:00 AM UTC

Last Modified on: 03/23/2021 11:24:59 PM UTC

CVE-2006-3617

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Pixelated By Lev Guestbook](#) from [Pixelated By Lev](#) contain the following vulnerability:

Cross-site scripting (XSS) vulnerability in pblguestbook.php in Pixelated By Lev (PBL) Guestbook 1.32 and earlier allows remote attackers to inject arbitrary web script or HTML via the (1) name, (2) message (aka comments), (3) website, and (4) email parameters, which bypasses XSS protection mechanisms that check for SCRIPT

tags but not others, as demonstrated by a javascript URI in an onMouseOver attribute and the src attribute in an iframe tag. NOTE: some vectors might overlap CVE-2006-2975, although the use of alternate manipulations makes it unclear.

CVE-2006-3617 has been assigned by [M](#) cve@mitre.org to track the vulnerability
