

# CVE-2006-3911

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-3911                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2006-07-28 00:04:00 UTC                                                                                                      |
| <b>Updated</b>         | 2018-10-17 21:32:00 UTC                                                                                                      |
| <b>Description</b>     | PHP remote file inclusion vulnerability in OSI Codes PHP Live! 3.2.1 and earlier allows remote attackers to execute arbitrar |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor   | Product  | Version | Update | Edition | Language |
|-------------|----------|----------|---------|--------|---------|----------|
| Application | Php Live | Php Live | All     | All    | All     | All      |
