

# CVE-2006-3913

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-3913                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@mitre.org                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2006-07-28 00:04:00 UTC                                                                                                     |
| <b>Updated</b>         | 2018-10-17 21:32:00 UTC                                                                                                     |
| <b>Description</b>     | Buffer overflow in Freeciv 2.1.0-beta1 and earlier, and SVN 15 Jul 2006 and earlier, allows remote attackers to cause a der |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                  | Product                 | Version     | Update | Edition | Language |
|-------------|-------------------------|-------------------------|-------------|--------|---------|----------|
| Application | <a href="#">Freeciv</a> | <a href="#">Freeciv</a> | 2.1.0_beta1 | All    | All     | All      |
| Application | <a href="#">Freeciv</a> | <a href="#">Freeciv</a> | 2.1.0_beta1 | All    | All     | All      |
