

# CVE-2006-4118

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-4118                                                                                                                   |
| <b>State</b>           | PUBLIC                                                                                                                          |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                   |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                    |
| <b>Published</b>       | 2006-08-14 23:04:00 UTC                                                                                                         |
| <b>Updated</b>         | 2018-10-17 21:33:00 UTC                                                                                                         |
| <b>Description</b>     | Multiple SQL injection vulnerabilities in GeheimChaos 0.5 and earlier allow remote attackers to execute arbitrary SQL commands. |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor    | Product     | Version | Update | Edition | Language |
|-------------|-----------|-------------|---------|--------|---------|----------|
| Application | Chaossoft | Geheimchaos | All     | All    | All     | All      |
