

# CVE-2006-4332

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-4332                                                                                                             |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | secalert@redhat.com                                                                                                       |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2006-08-24 20:04:00 UTC                                                                                                   |
| <b>Updated</b>         | 2017-07-20 01:33:00 UTC                                                                                                   |
| <b>Description</b>     | Unspecified vulnerability in the DHCP dissector in Wireshark (formerly Ethereal) 0.10.13 through 0.99.2, when run on Wind |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                    | Product                   | Version | Update | Edition | Language |
|-------------|---------------------------|---------------------------|---------|--------|---------|----------|
