

# CVE-2006-4350

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                         |
|------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-4350                                                                                                           |
| <b>State</b>           | PUBLIC                                                                                                                  |
| <b>Assigner</b>        | cve@mitre.org                                                                                                           |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                            |
| <b>Published</b>       | 2006-08-24 21:04:00 UTC                                                                                                 |
| <b>Updated</b>         | 2018-10-17 21:36:00 UTC                                                                                                 |
| <b>Description</b>     | SQL injection vulnerability in index.php in OneOrZero 1.6.4.1 allows remote attackers to execute arbitrary SQL commands |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                    | Product                   | Version | Update | Edition | Language |
|-------------|---------------------------|---------------------------|---------|--------|---------|----------|
| Application | <a href="#">Oneorzero</a> | <a href="#">Oneorzero</a> | 1.6.4.1 | All    | All     | All      |
| Application | <a href="#">Oneorzero</a> | <a href="#">Oneorzero</a> | 1.6.4.1 | All    | All     | All      |
