

# CVE-2006-4610

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-4610                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2006-09-07 00:04:00 UTC                                                                                                      |
| <b>Updated</b>         | 2018-10-17 21:38:00 UTC                                                                                                      |
| <b>Description</b>     | PHP remote file inclusion vulnerability in index.php in GrapAgenda 0.11 and earlier, when register_globals is enabled, allow |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor   | Product    | Version | Update | Edition | Language |
|-------------|----------|------------|---------|--------|---------|----------|
| Application | Graphiks | Grapagenda | All     | All    | All     | All      |
