

# CVE-2006-5642

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2006-5642                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                     |
| <b>Assigner</b>        | cve@mitre.org                                                                                                              |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                               |
| <b>Published</b>       | 2006-11-01 00:07:00 UTC                                                                                                    |
| <b>Updated</b>         | 2011-03-08 02:43:00 UTC                                                                                                    |
| <b>Description</b>     | Unspecified vulnerability in NmnLogger 1.0.0 and earlier has unknown impact and attack vectors related to configuration of |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor    | Product   | Version | Update | Edition | Language |
|-------------|-----------|-----------|---------|--------|---------|----------|
| Application | Nmnlogger | Nmnlogger | All     | All    | All     | All      |
