Summary

CVE	CVE-2006-5776
State	PUBLISHED
Assigner	mitre
Source Priority	CVE Program / NVD first with legacy fallback
Published	2006-11-07 00:07:00 UTC
Updated	2026-04-23 00:35:47 UTC
Description	Multiple PHP remote file inclusions in Ariadne 2.4.1 allows remote attackers to execute arbitrary PHP code via the ariadne.php file. The vulnerability exists in the file_inclusion() function, which does not properly sanitize the \$file parameter, allowing an attacker to inject arbitrary PHP code. This can be exploited by sending a request with a specially crafted \$file parameter, which will be executed as PHP code. The vulnerability is present in Ariadne 2.4.1 and earlier versions.

Risk And Classification

Primary CVSS: v2.0 7.5 from nvd@nist.gov
