

CVE-2006-6967

Published on: 02/03/2007 12:00:00 AM UTC

Last Modified on: 03/23/2021 11:25:04 PM UTC

CVE-2006-6967

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#)

The following vulnerability was found:

**** REJECT ** DO NOT USE THIS CANDIDATE NUMBER.** ConsultIDs: None. Reason: this candidate is solely about a configuration that does not directly introduce security vulnerabilities, so it is more appropriate to cover under the Common Configuration Enumeration (CCE). In addition, it describes standard behavior (publication of revocation lists) and as such does not cross privilege boundaries. Notes: the former description is: "Check Point FireWall-1 allows remote attackers to obtain certificate revocation lists (CRLs) and other unspecified sensitive information via an HTTP request for the top-level URI on the internal certificate authority (ICA) port (18264/tcp)."

CVE-2006-6967 has been assigned by cve@mitre.org to track the vulnerability
