

# CVE-2007-0118

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-0118                                                                                                                        |
| <b>State</b>           | PUBLIC                                                                                                                               |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                        |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                         |
| <b>Published</b>       | 2007-01-09 02:28:00 UTC                                                                                                              |
| <b>Updated</b>         | 2018-10-16 16:31:00 UTC                                                                                                              |
| <b>Description</b>     | Multiple absolute path traversal vulnerabilities in EditTag 1.2 allow remote attackers to read arbitrary files via an absolute path. |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                  | Product                 | Version | Update | Edition | Language |
|-------------|-------------------------|-------------------------|---------|--------|---------|----------|
| Application | <a href="#">Edittag</a> | <a href="#">Edittag</a> | 1.2     | All    | All     | All      |
| Application | <a href="#">Edittag</a> | <a href="#">Edittag</a> | 1.2     | All    | All     | All      |
