CVE-2007-1538

[Source: Mitre](#)

[Source: NIST](#)

[CVE.ORG](#)

[Print: PDF](#)

Certain versions of [Virusscan Enterprise](#) from [Mcafee](#) contain the following vulnerability:

**** DISPUTED **** McAfee VirusScan Enterprise 8.5.0.i uses insecure permissions for certain Windows Registry keys, which allows local users to bypass local password protection via the UIP value in (1) HKEY_LOCAL_MACHINE\SOFTWARE\McAfee\DesktopProtection or (2) HKEY_LOCAL_MACHINE\SOFTWARE\Network

Associates\TVD\VirusScan Enterprise\CurrentVersion. NOTE: this issue has been disputed by third-party researchers, stating that the default permissions for HKEY_LOCAL_MACHINE\SOFTWARE does not allow for write access and the product does not modify the inherited permissions. There might be an interaction error with another product.

CVE-2007-1538 has been assigned by [M](#) cve@mitre.org to track the vulnerability

CVSS2 Score: **7.5 - HIGH**
