

# CVE-2007-1662

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-1662                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                     |
| <b>Assigner</b>        | cve@mitre.org                                                                                                              |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                               |
| <b>Published</b>       | 2007-11-07 23:46:00 UTC                                                                                                    |
| <b>Updated</b>         | 2018-10-16 16:39:00 UTC                                                                                                    |
| <b>Description</b>     | Perl-Compatible Regular Expression (PCRE) library before 7.3 reads past the end of the string when searching for unmatched |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor               | Product              | Version | Update | Edition | Language |
|-------------|----------------------|----------------------|---------|--------|---------|----------|
| Application | <a href="#">Pcre</a> | <a href="#">Pcre</a> | All     | All    | All     | All      |
