

# CVE-2007-2013

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-2013                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                        |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                 |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                  |
| <b>Published</b>       | 2007-04-12 19:19:00 UTC                                                                                                       |
| <b>Updated</b>         | 2017-07-29 01:31:00 UTC                                                                                                       |
| <b>Description</b>     | Cross-site scripting (XSS) vulnerability in index.php in JEx-Treme Einfacher Passwortschutz allows remote attackers to inject |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor    | Product                  | Version | Update | Edition | Language |
|-------------|-----------|--------------------------|---------|--------|---------|----------|
| Application | Jex-treme | Einfacher Passwortschutz | All     | All    | All     | All      |
| Application | Jex-treme | Einfacher Passwortschutz | All     | All    | All     | All      |
