

# CVE-2007-2881

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-2881                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                   |
| <b>Assigner</b>        | cve@mitre.org                                                                                                            |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                             |
| <b>Published</b>       | 2007-05-29 20:30:00 UTC                                                                                                  |
| <b>Updated</b>         | 2017-07-29 01:31:00 UTC                                                                                                  |
| <b>Description</b>     | Multiple stack-based buffer overflows in the SOCKS proxy support (sockd) in Sun Java Web Proxy Server before 4.0.5 allow |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product                      | Version | Update | Edition | Language |
|-------------|--------|------------------------------|---------|--------|---------|----------|
| Application | Sun    | Java System Web Proxy Server | All     | All    | All     | All      |
