CVE-2007-3279

Source: Mitre

Source: NIST

CVE.ORG

Print: PDF

Certain versions of [Postgresql](#) from [Postgresql](#) contain the following vulnerability:

PostgreSQL 8.1 and probably later versions, when the PL/pgSQL (plpgsql) language has been created, grants certain plpgsql privileges to the PUBLIC domain, which allows remote attackers to create and execute functions, as demonstrated by functions that perform local brute-force password guessing attacks, which may evade intrusion

detection.

CVE-2007-3279 has been assigned by [M](#) cve@mitre.org to track the vulnerability
