

# CVE-2007-3434

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-3434                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2007-06-27 00:30:00 UTC                                                                                                      |
| <b>Updated</b>         | 2017-10-11 01:32:00 UTC                                                                                                      |
| <b>Description</b>     | index.php in Pharmacy System 2 and earlier allows remote attackers to obtain sensitive information via a ' (quote) character |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                       | Product                         | Version | Update | Edition | Language |
|-------------|------------------------------|---------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Netart Media</a> | <a href="#">Pharmacy System</a> | All     | All    | All     | All      |

## References
