

# CVE-2007-4370

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-4370                                                                                                                     |
| <b>State</b>           | PUBLIC                                                                                                                            |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                     |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                      |
| <b>Published</b>       | 2007-08-15 23:17:00 UTC                                                                                                           |
| <b>Updated</b>         | 2017-09-29 01:29:00 UTC                                                                                                           |
| <b>Description</b>     | Multiple buffer overflows in the (1) client and (2) server in Racer 0.5.3 beta 5 allow remote attackers to execute arbitrary code |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                | Product               | Version | Update | Edition | Language |
|-------------|-----------------------|-----------------------|---------|--------|---------|----------|
| Application | <a href="#">Racer</a> | <a href="#">Racer</a> | 0.5.3   | All    | All     | All      |
| Application | <a href="#">Racer</a> | <a href="#">Racer</a> | 0.5.3   | All    | All     | All      |
