

# CVE-2007-4437

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-4437                                                                                                             |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | cve@mitre.org                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2007-08-20 22:17:00 UTC                                                                                                   |
| <b>Updated</b>         | 2017-07-29 01:32:00 UTC                                                                                                   |
| <b>Description</b>     | SQL injection vulnerability in albums.php in Ampache before 3.3.3.5 allows remote attackers to execute arbitrary SQL comr |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                  | Product                 | Version | Update | Edition | Language |
|-------------|-------------------------|-------------------------|---------|--------|---------|----------|
| Application | <a href="#">Ampache</a> | <a href="#">Ampache</a> | All     | All    | All     | All      |
