CVE-2007-4784

Source: Mitre

Source: NIST

CVE.ORG

Print: PDF

Certain versions of [Php](#) from [Php](#) contain the following vulnerability:

The setlocale function in PHP before 5.2.4 allows context-dependent attackers to cause a denial of service (application crash) via a long string in the locale parameter. NOTE: this might not be a vulnerability in most web server environments that support multiple threads, unless this issue can be demonstrated for code execution.

CVE-2007-4784 has been assigned by [M](#) cve@mitre.org to track the vulnerability
