

# CVE-2007-5066

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-5066                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2007-09-24 23:17:00 UTC                                                                                                      |
| <b>Updated</b>         | 2017-07-29 01:33:00 UTC                                                                                                      |
| <b>Description</b>     | Unspecified vulnerability in Webmin before 1.370 on Windows allows remote authenticated users to execute arbitrary commands. |

## Risk And Classification

### Problem Types: CWE-20

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product | Version | Update | Edition | Language |
|-------------|--------|---------|---------|--------|---------|----------|
| Application | Webmin | Webmin  | All     | All    | All     | All      |
