

# CVE-2007-6470

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2007-6470                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                     |
| <b>Assigner</b>        | cve@mitre.org                                                                                                              |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                               |
| <b>Published</b>       | 2007-12-20 00:46:00 UTC                                                                                                    |
| <b>Updated</b>         | 2008-09-05 21:33:00 UTC                                                                                                    |
| <b>Description</b>     | phpRPG 0.8 stores sensitive information under the web root with insufficient access control, which allows remote attackers |

## Risk And Classification

**Problem Types:** CWE-264

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                 | Product                | Version | Update | Edition | Language |
|-------------|------------------------|------------------------|---------|--------|---------|----------|
| Application | <a href="#">Phprpg</a> | <a href="#">Phprpg</a> | 0.8     | All    | All     | All      |
| Application | <a href="#">Phprpg</a> | <a href="#">Phprpg</a> | 0.8     | All    | All     | All      |
