

# CVE-2008-0101

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-0101                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                   |
| <b>Assigner</b>        | cve@mitre.org                                                                                                            |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                             |
| <b>Published</b>       | 2008-01-08 02:46:00 UTC                                                                                                  |
| <b>Updated</b>         | 2018-10-15 21:57:00 UTC                                                                                                  |
| <b>Description</b>     | Format string vulnerability in the swDebugf function in DuneApp.cpp in White_Dune 0.29 beta791 and earlier allows remote |

## Risk And Classification

### Problem Types: CWE-20

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor     | Product    | Version | Update | Edition | Language |
|-------------|------------|------------|---------|--------|---------|----------|
| Application | White Dune | White Dune | All     | All    | All     | All      |
