

# CVE-2008-0295

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-0295                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                   |
| <b>Assigner</b>        | cve@mitre.org                                                                                                            |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                             |
| <b>Published</b>       | 2008-01-16 22:00:00 UTC                                                                                                  |
| <b>Updated</b>         | 2017-09-29 01:30:00 UTC                                                                                                  |
| <b>Description</b>     | Heap-based buffer overflow in modules/access/rtsp/real_sdpplin.c in the Xine library, as used in VideoLAN VLC Media Play |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor   | Product          | Version | Update | Edition | Language |
|-------------|----------|------------------|---------|--------|---------|----------|
| Application | Videolan | Vlc Media Player | All     | All    | All     | All      |

## References
