Summary

CVE	CVE-2008-1459
State	PUBLISHED
Assigner	mitre
Source Priority	CVE Program / NVD first with legacy fallback
Published	2008-03-24 18:44:00 UTC
Updated	2026-04-23 00:35:47 UTC
Description	SQL injection vulnerability in the Alberghi (com_alberghi) 2.1.3 and earlier component for Mambo and Joomla! allows remote attackers to execute arbitrary SQL commands via the 'id' parameter to the 'view' method of the 'AlberghiController' class. The vulnerability exists in the 'getid' function of the 'AlberghiController' class, which does not properly sanitize the 'id' parameter before using it in a SQL query. This allows an attacker to inject malicious SQL code that can be executed by the database. The vulnerability is present in versions 2.1.3 and earlier of the component.

Risk And Classification

Primary CVSS: v2.0 7.5 from nvd@nist.gov
