

# CVE-2008-1920

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                         |
|------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-1920                                                                                                           |
| <b>State</b>           | PUBLIC                                                                                                                  |
| <b>Assigner</b>        | cve@mitre.org                                                                                                           |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                            |
| <b>Published</b>       | 2008-04-23 13:05:00 UTC                                                                                                 |
| <b>Updated</b>         | 2018-10-11 20:37:00 UTC                                                                                                 |
| <b>Description</b>     | Heap-based buffer overflow in the boxelyRenderer module in the Personal Status Manager feature in ICQ 6.0 build 6043 al |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor              | Product                       | Version | Update | Edition | Language |
|-------------|---------------------|-------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Icq</a> | <a href="#">Mirabilis Icq</a> | 6.0     | All    | All     | All      |
| Application | <a href="#">Icq</a> | <a href="#">Mirabilis Icq</a> | 6.0     | All    | All     | All      |
