

# CVE-2008-2040

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                      |
|------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-2040                                                                                                        |
| <b>State</b>           | PUBLIC                                                                                                               |
| <b>Assigner</b>        | cve@mitre.org                                                                                                        |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                         |
| <b>Published</b>       | 2008-04-30 16:17:00 UTC                                                                                              |
| <b>Updated</b>         | 2017-08-08 01:30:00 UTC                                                                                              |
| <b>Description</b>     | Stack-based buffer overflow in the HTTP::getAuthUserPass function (core/common/http.cpp) in Peercast 0.1218 and gnom |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                   | Product                  | Version | Update | Edition | Language |
|-------------|--------------------------|--------------------------|---------|--------|---------|----------|
| Application | <a href="#">Peercast</a> | <a href="#">Peercast</a> | 0.1218  | All    | All     | All      |
| Application | <a href="#">Peercast</a> | <a href="#">Peercast</a> | 0.1218  | All    | All     | All      |
